

This is how easy the Hueber Media app works

Select title

Tap on "Add book" in the "Books" tab. You can now select the desired title from the list e.g. **Menschen A1.1** or enter the title or ISBN of the book in the search field.

You always have the choice between off- and online

If videos are available, you can always choose whether you want to save the videos on the device. You can play downloaded videos at any time - even offline. Videos that have not been loaded are streamed, during which time the app requires Internet access.

Even after the videos have been downloaded, you can change your decision at any time: Go to "Books" and click on the info button to the right of the title.

Audios can only be played if you have saved them on the device. This means you always have them at hand even when you are offline.

Navigate easily to the media through the book

After you have added the media of a title, click on the title in "Books". Now simply swipe/scroll sideways through the mini-pages. Or enter the page number in the search (magnifying glass symbol at the top right). All available media are displayed in a list below the page.

Playing media

Tap on an entry in the list to play the file.

Use the corresponding icons next to the audio file to stop playback or jump back to the beginning. Of course, you can also move the circle in the play bar at the bottom to fast-forward or rewind with pinpoint accuracy.

If you have not downloaded the videos locally to the device, the icon is not filled with blue, but only outlined. It may then take a moment before online playback (streaming) begins.
